INTEL POWERS GLOBAL OPERATIONS WITH 100% RENEWABLE ELECTRICITY

In 2023, Intel reached 100% renewable electricity use in the U.S., Europe, Israel, Malaysia, Vietnam, and China, with Costa Rica close behind. This milestone reflects Intel's global commitment to reducing emissions and driving a more sustainable energy future.

100% Water Return to Local Watersheds

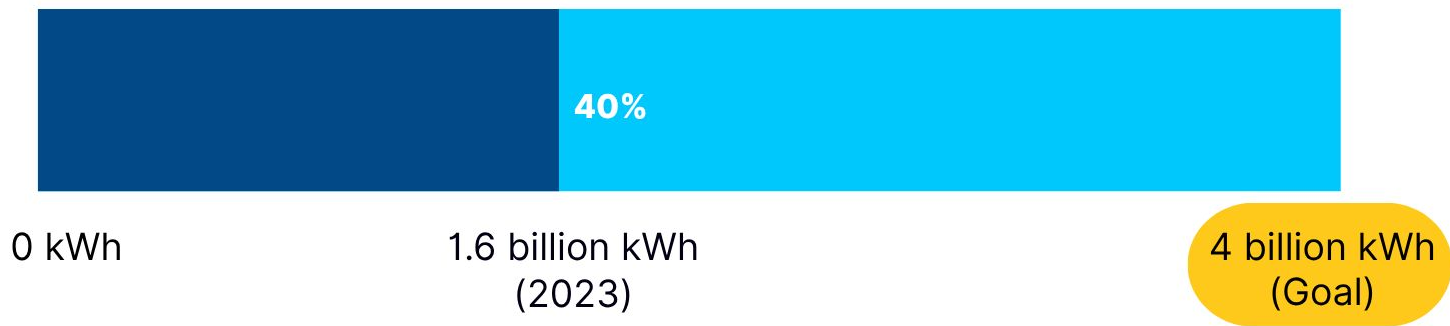

Net Positive Water

Intel's Ocotillo campus has reached a critical milestone by returning or restoring 100% of its water usage to local watersheds. This "net positive" water status reflects Intel's investment in sustainable infrastructure and water reclamation.

Intel Has Saved 1.6 Billion kWh of Electricity Since 2020 and On Track for 4 Billion by 2030

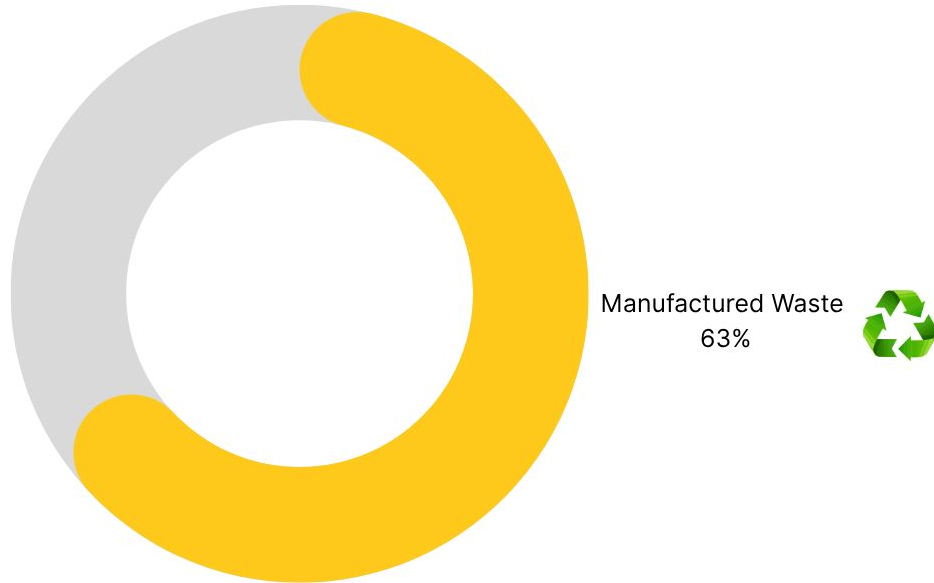

Progress Toward 2030 Goal

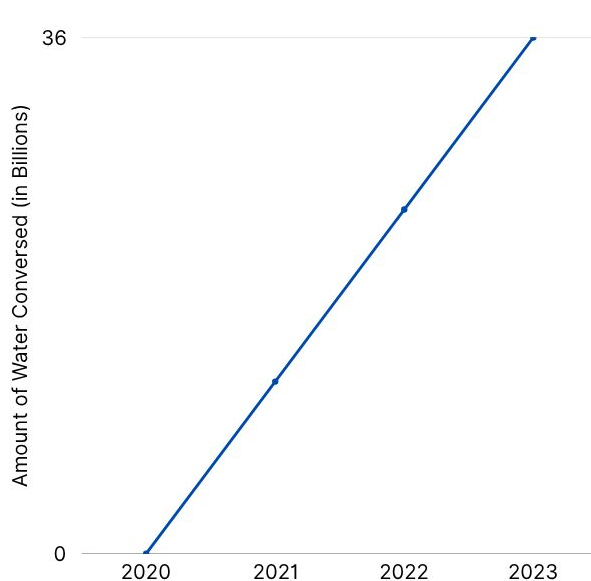

Since 2020, Intel has saved 1.6 billion kilowatt-hours (kWh) of electricity through energy efficiency projects. This progress puts the company well on its way toward its 2030 goal of 4 billion kWh saved, reducing both emissions and operating impact.

63% OF MANUFACTURING WASTE DIVERTED THROUGH CIRCULAR STRATEGIES

Intel diverted 63% of its manufacturing waste, **amounting to over 75,800 tons**, by using circular economy strategies like reuse, resale, and recycling.

36 Billion Gallons of Water Conserved Since 2020

Enough to supply 1.2 million Americans for an entire year

Water conservation is a pillar of Intel's environmental strategy. Since 2020, Intel has saved 36 billion gallons of water through efficiency upgrades and facility optimization. Its equivalent to the annual water use of many households.
